Business Overview

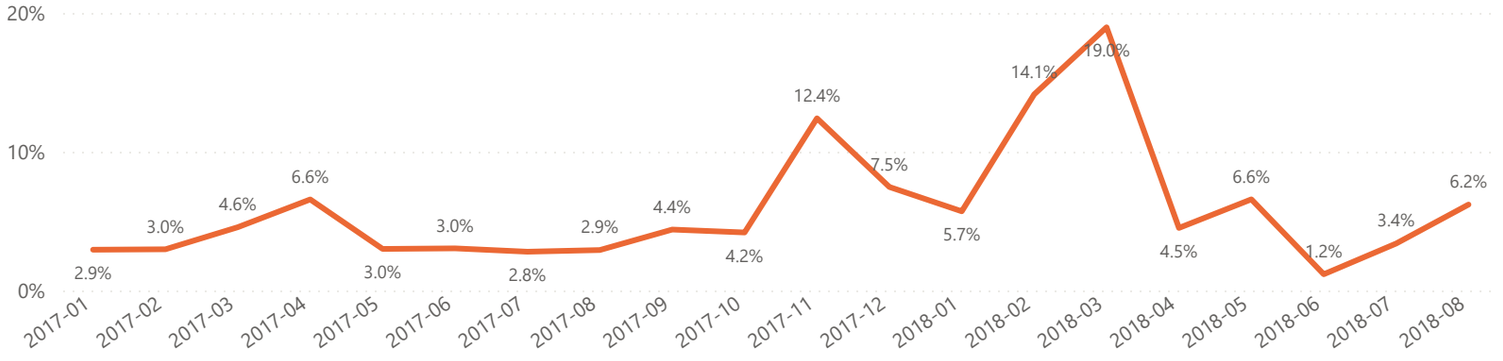

All orders (one row per order), purchases Sep-2016 to Oct-2018. Monthly charts use complete months Jan-2017 to Aug-2018. Late = delivered on a later calendar date than the estimate.

99,441	96,470	6.8%	4.16	R$ 15.42M
Total orders (all statuses)	Delivered orders (delivery KPI)	Late-delivery rate	Avg review score, delivered (1-5)	Delivered order value, BRL (not profit)

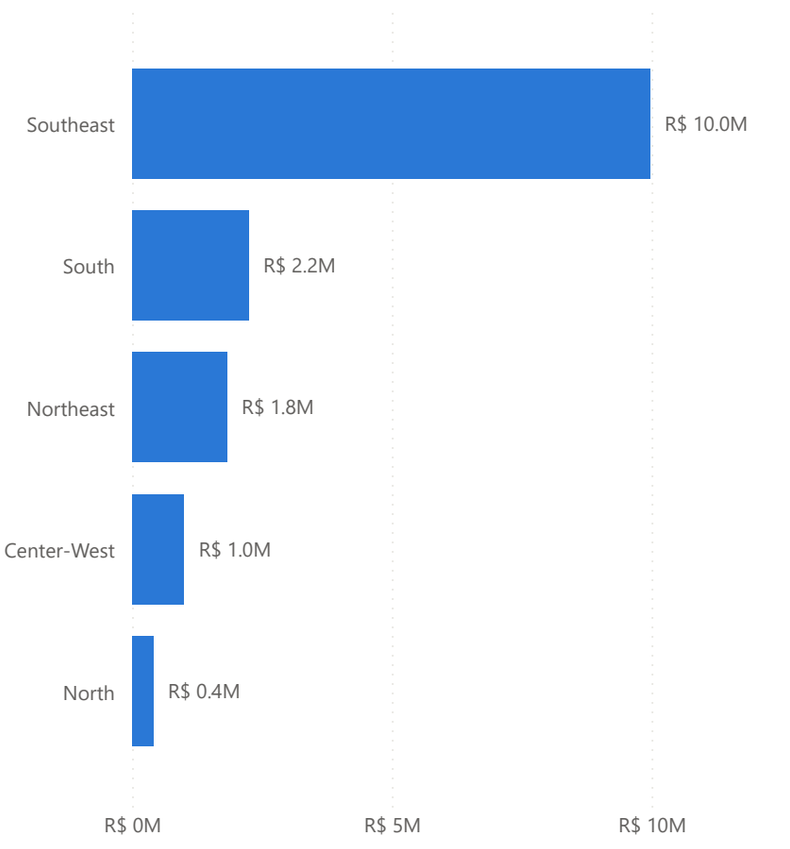

Orders placed per month (purchase month)

Late-delivery rate per month (late / delivered orders, by purchase month)

Delivered order value by customer region (BRL, not profit)

Source: Olist public dataset (Kaggle) via SQLite build (data/processed/olist.db). Order value = item price + freight in BRL; it is gross merchandise value, not profit. See the Metric Definitions page.

Delivery Operations

Delivered orders only. Rankings need minimum volumes (lanes 300, categories 500, sellers 100 delivered orders). Excess late = late orders above the marketplace rate.

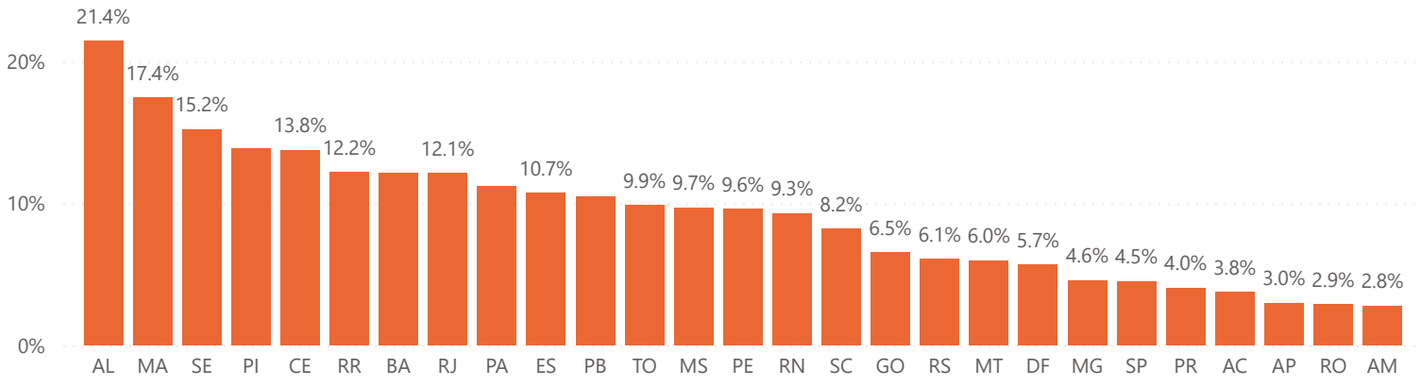

Purchase date 9/1/2016 – 12/31/2018

Customer region All

Product category All

Seller All

Late-delivery rate by customer state (hover for sample size)

Shipping lanes by excess late orders (>= 300 delivered orders)

Lane (seller -> customer state)	Delivered	Late %	Excess late	Median carrier day
SP -> RJ	8,188	14.1%	597	9.
SP -> BA	2,313	12.8%	140	14.
SP -> ES	1,467	12.3%	81	9.
SP -> CE	970	13.7%	67	15.
SP -> SC	2,336	9.5%	64	10.
SP -> MA	493	19.1%	61	16.
PR -> RJ	978	12.0%	51	10.
SP -> PA	683	12.0%	36	17.
SP -> PE	1,134	9.8%	34	13.
SP -> PI	329	16.4%	32	13.

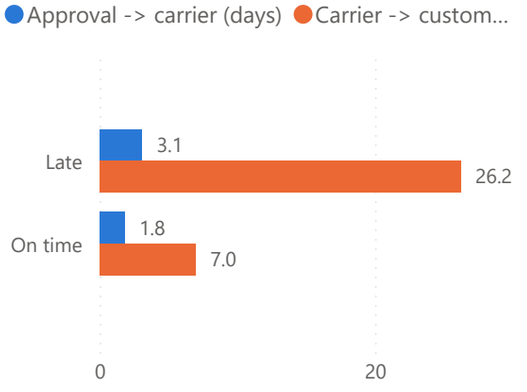

Sellers by excess late orders (>= 100 delivered orders)

Categories by excess late orders (>= 500 delivered orders)

Category	Delivered	Late %	Excess la
health_beauty	8,647	7.5%	
bed_bath_table	9,272	7.4%	
baby	2,809	8.0%	
watches_gifts	5,493	7.4%	
furniture_decor	6,307	7.1%	
electronics	2,517	7.6%	
auto	3,809	7.3%	
office_furniture	1,254	8.1%	
telephony	4,093	7.1%	
unknown	1,392	7.3%	

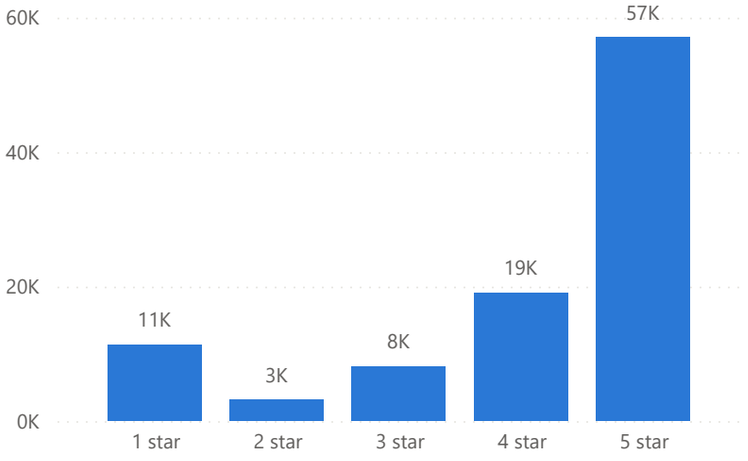

Median days per stage (all stage timestamps valid)

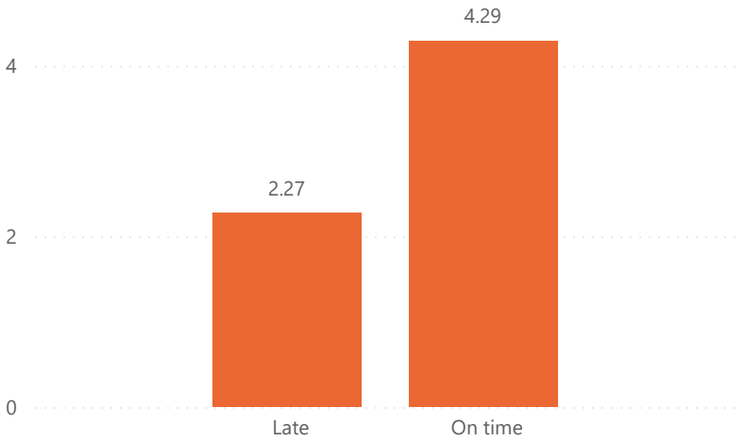

Customer Experience

Reviewed orders, one review per order. Differences between on-time and late orders are associations, not proof that delay causes lower scores.

Review-score distribution (all reviewed orders)

Average review score: on time vs late (delivered orders)

74.5%

Late-order reviews written BEFORE the parcel arrived

3.53

Avg score of late orders reviewed after delivery

Review-timing caveat: Olist appears to send the survey around the estimated date, so most late-order reviews rate a parcel that has not arrived. The on-time vs late gap shrinks for reviews written after delivery. Treat the gap as an association.

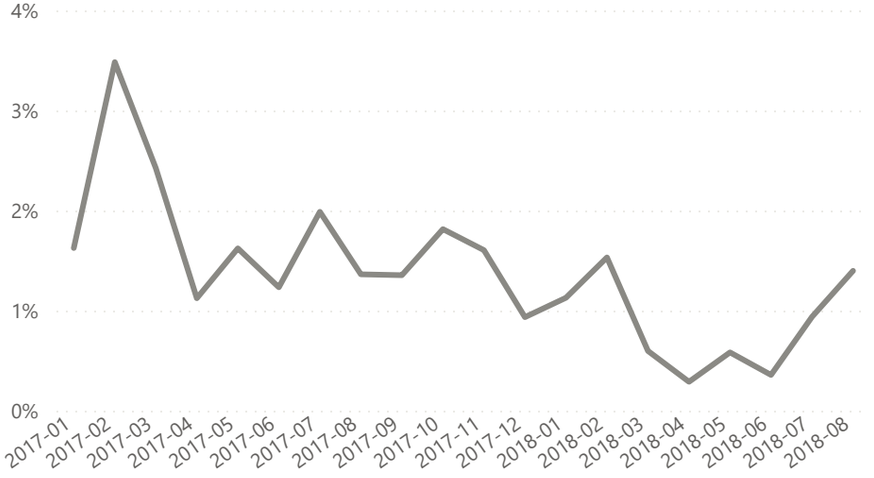

Late rate and review score by region

Customer region	Delivered	Late %	Avg review
Northeast	9,044	12.7%	3.97
North	1,796	8.6%	4.03
Center-West	5,624	6.5%	4.13
Southeast	66,193	6.1%	4.18
South	13,813	5.9%	4.19
Total	**96,470**	**6.8%**	**4.16**

Late rate and review score by category (>= 1,000 delivered orders)

Category	Delivered	Late %	Avg review
office_furniture	1,254	8.1%	3.64
baby	2,809	8.0%	4.10
electronics	2,517	7.6%	4.12
health_beauty	8,647	7.5%	4.23
bed_bath_table	9,272	7.4%	4.00
watches_gifts	5,493	7.4%	4.12
auto	3,809	7.3%	4.15
unknown	1,392	7.3%	4.01
furniture_decor	6,307	7.1%	4.06
telephony	4,093	7.1%	4.05
Total	**86,547**	**6.8%**	**4.15**

Canceled + unavailable share of all orders, by month

Metric Definitions

Every measure lives in the _Measures table (hover a field for its description). Totals below must equal reports/headline_metrics.json from the SQLite build.

Reconciliation totals (no filters applied)

Total Orders	Delivered Orders	Late Orders	Late Rate %	Late Rate % (Timestamp Rule)	Canceled Orders	Unavailable Orders	Delivered Order Value (BRL)
99,441	96,470	6,534	6.8%	8.1%	625	609	R$ 15,419,774

Reconciliation: reviews and lifecycle medians

Avg review, on time	Avg review, late	Late reviews before delivery	Median hours to approval	Median days to carrier	Median days carrier transit	Median days to delivery
4.29	2.27	74.5%	0.3	1.8	7.1	10.2

Grain. fct_orders has one row per order; order measures count its rows. Category, seller and lane filters reach orders through the order<->item relationship, so an order is counted once.
Delivered orders (delivery-KPI population). Status = delivered AND a customer delivery timestamp (96,470 of 99,441). Shipped, canceled, unavailable, invoiced, processing, created, approved and 8 delivered orders without a date are excluded.
Late delivery. Delivered on a later CALENDAR DATE than the estimated delivery date. The estimate is stored at midnight (a date, not a time), so the literal timestamp rule - shown as Late Rate % (Timestamp Rule) - also counts same-day deliveries as late.
Excess late orders. Late orders - delivered orders x marketplace late rate: how many late orders a group adds above the average. Used to prioritise groups because it combines rate and volume.
Lifecycle stages. Medians over delivered orders whose two timestamps exist and are in order (1,350 orders handed to the carrier before approval and 23 delivered before carrier hand-off are excluded from those stages).
Reviews. One review per order (most recently answered). Averages ignore orders without a review. Late vs on-time differences are associations; many late-order reviews are written before delivery.
Order value. Item price + freight in BRL for delivered orders. It is gross merchandise value - not Olist revenue and not profit (the dataset has no cost data). Payments (BRL) can differ (instalment interest, vouchers).
Refresh. Rebuild the CSVs with python scripts/build_database.py, then Home > Refresh. The DataFolder parameter (Transform data > Edit parameters) points to data/processed/.
